

Aditya Bhaskar Sharma

Senior iOS Engineer | SwiftUI | AI-Augmented Product Builder

✉ adityabhaskarsharma@gmail.com ☎ +91 7018447933 📍 India 🌐 [Live Portfolio](#)

Summary

Senior engineer with 13 years building and shipping production software, focused on iOS and macOS development with SwiftUI since 2022. I design calm, performance-focused apps that prioritize clarity and long-term user value — recent shipped work includes Mudo and Gita Essence on the App Store.

I work as an AI-augmented developer: I use AI as a force multiplier for velocity, but the value I bring is the judgment layer on top — catching hallucinated APIs, spotting performance and memory issues AI misses, and making architectural calls that keep codebases maintainable at scale. Code generation is cheap now; the rare skill is reviewing, correcting, and directing AI output with depth.

Background in full-stack engineering strengthens my system-level thinking. Today my work centers on thoughtful mobile experiences, offline-first architecture, and sustainable product direction.

Experience

Independent Product Engineer

Remote

Senior Mobile Engineer

2022 - Present

- Owned end-to-end development of iOS applications using SwiftUI, from concept to App Store release
- Designed scalable architectures using SwiftUI, CoreData, and Swift Concurrency with focus on performance and maintainability
- Built offline-first mobile systems with real-time UI updates and reliable local persistence
- Collaborated on product direction, translating user needs into shipped features
- Integrated AI tooling (Claude, Copilot) into daily workflow — reviewing generated code for Swift Concurrency pitfalls, API correctness, and memory behavior; treating AI as a junior pair, not a replacement for judgment

LazyCodeLab

India/Remote

Founder

2019-Present

Founded and operated a remote product-focused development studio delivering custom web solutions.

Projects

Mudo

2025 - Present

- Built and shipped an iOS mood tracking app using SwiftUI and CoreData with offline-first architecture and real-time state updates
- Designed clean, low-friction UX focused on daily habit formation

Gita Essence

2025 - Present

- Developed and launched an App Store iOS app with offline content delivery, reminders, and structured data presentation
- Implemented efficient local storage and lightweight content rendering

Heckle

2026 - Present

The coding accountability app that monitors your workflow and roasts procrastination. Stop context-switching. Start shipping. Your IDE is watching.

Skills

🧠 AI-Augmented Engineering

Claude, GitHub Copilot, prompt engineering, AI code review, hallucination detection Expert

🍏 iOS and macOS Development

Swift, SwiftUI, CoreData, Swift Concurrency, UIKit

📱 Cross Platform Mobile

React Native, Expo

📄 Frontend Engineering

Expert

React, JavaScript, CSS

Backend and Systems

PHP, API Design, Product Architecture

Education

Chandigarh University

Civil Engineering

Bachelor of Engineering • 7.2 CGPA

PB, India • 2012-2016

Engineering graduate with strong self-directed transition into software development and product engineering.

Languages

English

Fluent

Hindi

Native

Japanese

N3

Interests

🔧 Product Building

iOS, macOS, Indie Apps

📖 Writing and Reflection

Journaling, Philosophy

🎨 Creative Design

Pixel Art, Game Design
